

Mobile GUI

The mobile GUI allows hotel guests easy and intuitive control of the room. No app installation is required; everything operates through a web application optimized for smartphones.

The link for accessing the application is provided as a QR code on the touch panel in the room. The link automatically change when the guest in the room is replaced, ensuring that former guests can no longer control the room.

- 1** QR code link for the mobile GUI web page. To manage the room, scan the code with a smartphone. The website address and QR code automatically change when a new guest checks into the room, preventing former guests from controlling the room.

The image shows a mobile application interface for a hotel named "HIQ Hotel". The header features the hotel's logo, which includes a stylized robot character, and the tagline "Where Hospitality Meets Innovation". Below the header, there is a section for entering a PIN code. This section contains a text prompt "Please enter PIN code", a dark grey input field, and a numeric keypad with buttons for digits 1 through 9, 0, a "C" (clear) button, and an "E" (enter) button. The interface is enclosed in a dashed yellow border. Two numbered callouts are present: callout 1 points to the hotel logo, and callout 2 points to the PIN entry section.
