

Mobile GUI

The mobile GUI allows hotel guests easy and intuitive control of the room. No app installation is required; everything operates through a web application optimized for smartphones.

The link for accessing the application is provided as a QR code on the touch panel in the room. The link automatically change when the guest in the room is replaced, ensuring that former guests can no longer control the room.

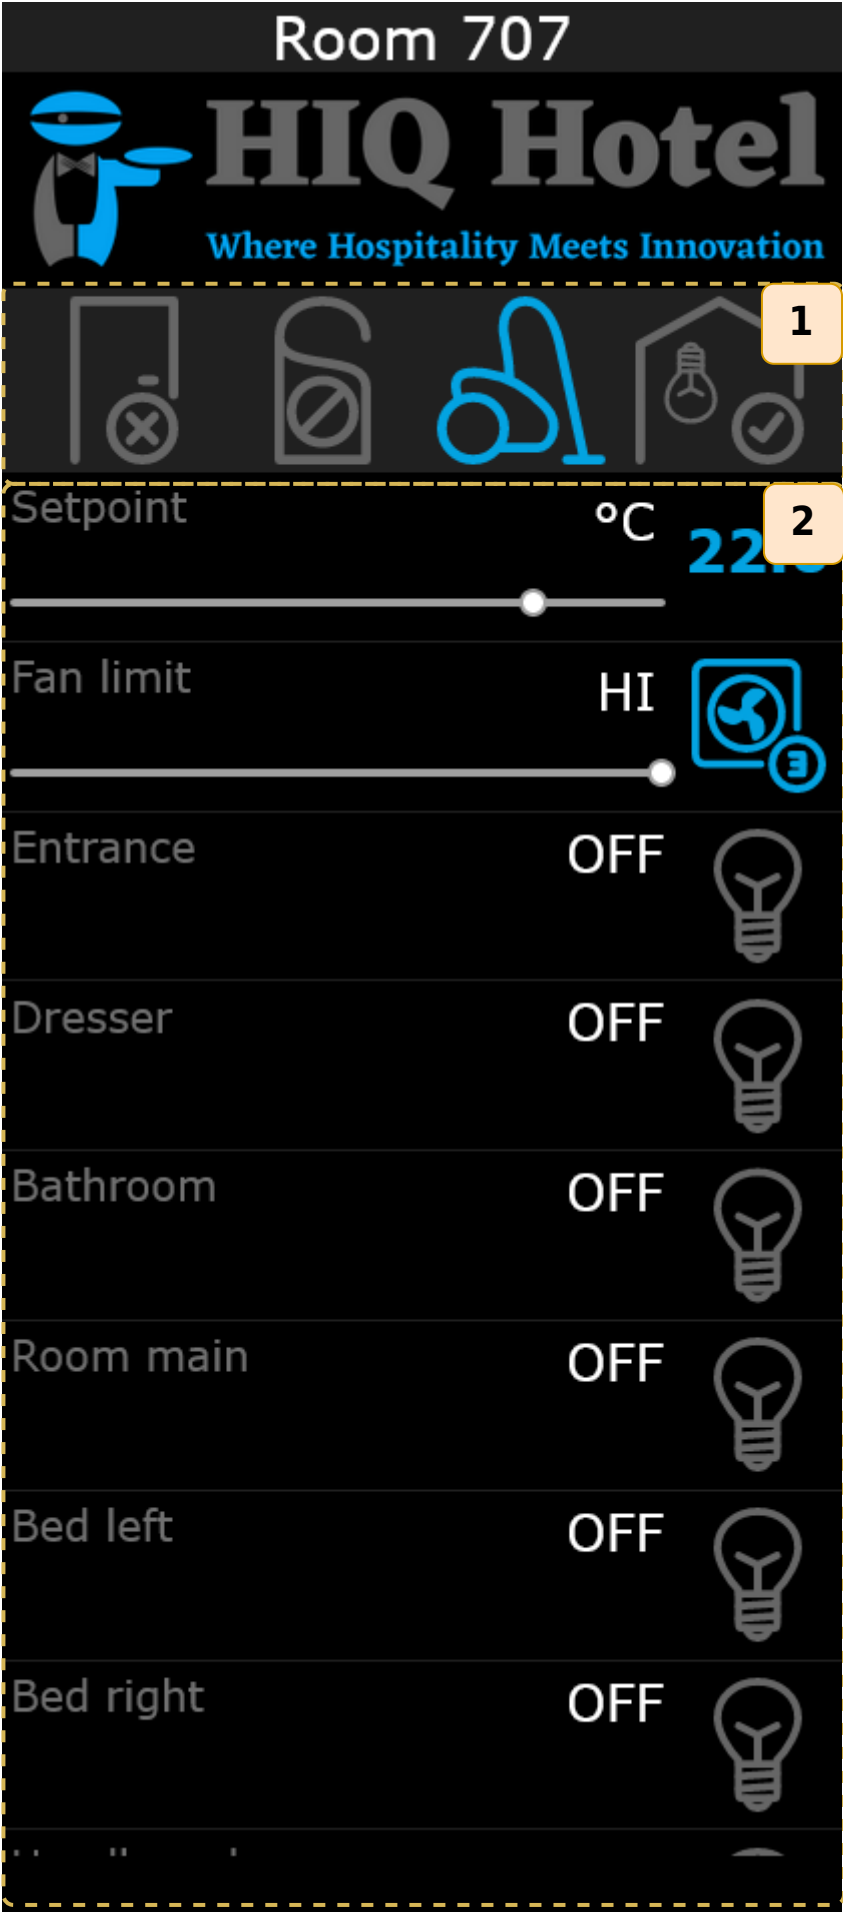

- 1** QR code link for the mobile GUI web page. To manage the room, scan the code with a smartphone. The website address and QR code automatically change when a new guest checks into the room, preventing former guests from controlling the room.

The image shows a mobile application interface for a hotel named "HIQ Hotel". The header area, enclosed in a dashed yellow border and labeled with a yellow box containing the number "1", features the hotel's logo on the left and the text "HIQ Hotel" in a large, bold, grey font. Below the name is the tagline "Where Hospitality Meets Innovation" in a smaller, blue font. The main content area, also enclosed in a dashed yellow border and labeled with a yellow box containing the number "2", contains the text "Please enter PIN code" in a light grey font. Below this text is a dark grey rectangular input field. Underneath the input field is a numeric keypad with buttons for digits 1 through 9, 0, a "C" (clear) button, and an "E" (enter) button. At the bottom of the screen, the text "Robotina d.o.o" is displayed in a small, purple font.
