

To run RDC Charger application it is required:

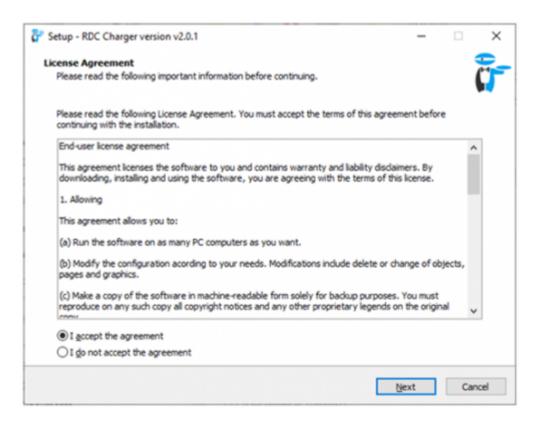

- to establish connection between charger and router by UTP cable
- to connect charger to the power supply
- download and install latest version of application for RDC Charger *

Once RDC Charger is configured, it does not require further connection to internet or configurator for normal operation !

*Latest version of RDC Charger (EVSE) can be found under Downloads map.

Installation

- run rdc_charger .exe file from Downloads
- · select default or desired folder

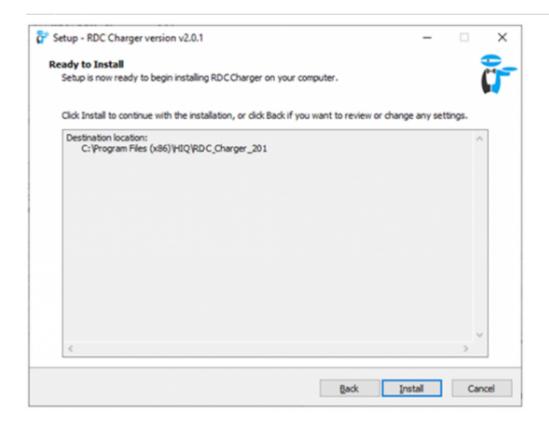

2° Setup - RDC Charger version v2.0.1	-		×
Select Destination Location Where should RDX Charger be installed?			Ċ_
Setup will install RDC Charger into the following folder.			
To continue, click Next. If you would like to select a different folder, click Browse.			
C:\Program Files (x86)\HIQ\RDC_Charger_201	В	rowse	
		-	
At least 12,9 MB of free disk space is required.			
Back Ne	ext	Car	ncel

- select charger serial number (SN), visible on sticker *
- run install

*if does not appear a window with SN or it is not listed it means that application at this moment did not recognize charger. Continue with installation and select SN on application later.

Setup - RDC Charger version v2.0.1	-		×
Select RDC Charger		4	2
Which charger should be selected when the program is installed?			
Choose one, other chargers can be selected later.			
○ 30566		^	
○ 30566			
○ 31059

1. EVSE Name

Name of EVSE - default is RDC Charger.

2. DLM sign	
-------------	--

××	Yellow status when DLM is enabled and active. Green status when enabled and not active. None if DLM is not set.		
3. Data from ongoing charging session			

b. Data nom ongoing tharging session				
EV charging icon with LED light	Different LED light colour is presenting charger state, while icon acts as a button. Short press toggle enable/pause charging, long press for priority charging and error reset.			
State	EVSE status: Communication error; Unknown; Available; EV not connected; Starting; Charging; EV paused; EVSE paused; EV not connected; Charging ended; Charging fault; Unpausing; Unavailable; No EVSE response; Locked, no EV; Stopping; Locked, EV connected; Paused by DLM;			
Phases - number of used phases while charging	3 phases, Phase L1, Phase L2, Phase L3, Unknown phase, 2 phases.			
Power	Charging power of EV.			
EVSE max	Charging current by phase.			
Max current	Allowed max charging current.			

Last session	Time - duration of charging session, Energy - consumed				
	energy of charging session.				
4. Error message(s)					
Undervoltage; Charge with ventil	oltage; CP negative voltage; RCD sensor trip; Overvoltage; ation; PS reading error (EVSE); Current is higher than allowed; temperature is too high; PS reading error (grid) see table below.				
5. EVSE settings					
Priority charging	Utilize all available power to charge as fast as possible ignoring economy charging.				
Locked	Disable unauthorized use of EVSE, authorization is possible with RFID tags or by cloud application.				
Allow charging with ventilation	Allow/deny charging if EV requests ventilation.				
Disable button	Disable functionality of button on housing.				
Turn LED off after 3 minutes of inactivity	LED light is turned off after 3 minutes.				
Eco charging	Use current: set desired current for charging. Charge only at LO tarriff: charging possible at low tariff only. Note: LO tarriff must be set. Charge with surplus energy: dynamically charge EV if there is surplus energy				
EVSE works as slave	EVSE is a slave to master (Modbus TCP communication) EVSE with its serial number-SN. Green tick if communication is OK, red X for lost communication.				
Limit if connection with master is lost	In case of lost communication, use set charging current.				
6. Event log					
Shows last 10 charging session.					
begin & end time	Begin date, hour and end of charging session.				
duration	Duration of charging session [h:min].				
energy	Consumed energy in session.				
card nr./type	Card ID used for charging session. If note "not locked" card ID is not used/needed.				
note	Status message about charging session (normal or some error).				
7. RFID, MIFARE and QR	7. RFID, MIFARE and QR				
	QR code, for managing authorized access to EVSE.				
Card no. & card ID	Supported up to 10 RFID/MIFARE/QR tags/cards.				
Manage card	Press Add for new card or delete existing one.				
Time	60 seconds time frame for adding new card.				
8. Time & date and SW versio					
Time and date with software vers	ion release.				
9. configurator					
Runs Configurator					
10. autodetect					
Click to find EVSE in local network	<				

Error table

RDC Charger recovers error automatically. To delete error by yourself long press button on charger housing or on application. **Charging is stopped while error is active. If red light still flashes, please read table bellow.**

Error	Possible causes	Possible solution
CP positive voltage CP negative voltage	Measured voltage on CP pin is out of range.	Check your charging cable and plug. Reconnect your EV. If error still appears, please contact your EVSE service.
RCD sensor trip	DC current leak detected.	Please try to connect another EV, if error still appears, please contact your EVSE service. Otherwise, please contact an authorized car service department.
RCD sensor malfunction	RCD sensor is damaged or not connected.	Please contact your EVSE service.
Undervoltage Overvoltage	Supply voltage is out of range.	Please contact your EVSE installer.
Charge with ventilation	EV requests charging with ventilation and "Charging with ventilation" is not enabled on configurator	Enable "Allow charging with ventilation" if charged EV is located in ventilated area.
PS reading error	No communication with internal power sensor.	Please contact your EVSE service.
Current is higher than allowed	Vehicle draws more power than allowed.	Please try to charge another EV, if error still appears, please contact your EVSE service. Otherwise, please contact an authorized car service department.
Internal temperature is too high	Temperature inside of charger is too high.	Make sure charger is not exposed to direct sunlight. Please contact your EVSE installer.

1.72	loggre	consume	Heat pump :	supported op	eration mode						
						Increased +	Enter number				
		Off	Reduced	Normal	Increased	add. heater	of channels				
Heat p	ump 1						2				
Heat p	ump 2						1.000				
Heat p	ump 3						3				
Heat p	ump 4						1 3				

1. Wireless relay WR-1 output function

In the left column are WR modules WR-1 (max 8) with corresponding status (active + communication status). To each WR could be assigned HEMS function (e.g. digital, linker reset, router reset, heat pump channel etc) with output mode (normal or inverted).

2. HEMS input and output function (wired connection) - not for EVSE available

In the left column are MC controller ports to which could be assigned MC-230 functions (digital, linker reset, router reset, etc) with output mode (normal or inverted).

Default settings are for e.g. $QX0 \rightarrow digital 1$ while digital 1 is defined for consumer 1 on settings page. Change to define new function role to QX0 port e.g. for linker reset

Enable consumer at input IX0,IX1 or IX2 means that dedicated consumer will be managed (ON/OFF) by input signal on IX0,IX1 or IX2. For example, if thermostat signal is wired to IXO port and "Enable consumer 1" to IX0, while thermostat is active, consumer 1 is active and otherwise.

Limitations: one temperature sensor is allowed, one consumer could be managed by one input only.

3. Heat pump supported operation mode

To control Heat pump by EVSE, define supported operation(control) mode based on heat pump specification. E.g. SGRHP supports external control by two channels (Off, Normal, Increased and Increased + additional heater) thus select them in table to enable functionality.

Note: Before selecting modes, heat pump must be defined in setting page!

4. Slave device IP address

For device (PV inverter or external EVSE) define its IP address.

1.Turn 2.Withi	a new modu ON target i in 10 secon module(s)	module(s) ds press "Pa	exit								

1. System settings		
eStore	c	eStore serial number (automatically detected or can be entered manually).
	[] enable	When selected EVSE will obtain necessary data (power, voltage) directly from battery storage system, no need to additional power sensor.
	[detect]	eStore address is cleared and new eStore can be detected.

HIQ Home	C	HIQ Home serial number (automatically detected or can be entered manually).						
	[] enable	When checked HEMS will read Grid power and energy from HIQ Home (so there is no need to duplicate power-sensor).						
	[detect]	HIQ Home address is cleared so new can be detected.						
Virtual grid PS	[] enable	Select if system is without main grid power meter. Energy, power and currents are calculated from other power meters.						
Internal temperature	Temperatu	re inside of EVSE						
Modbus (wired) cycle time	Cumulative	reading time of all wired power sensor in ms						
Modbus (wireless) cycle time	Cumulative reading time of all wireless connected power sensor in ms							
Modbus (TCP) cycle time	Cumulative	reading time of all TCP connected devices in ms						
IP address	IP address	of EVSE						
DHCP		DHCP to obtain an IP address automatically \rightarrow save to confirm.						
Static IP	Set static IF	P to EVSE \rightarrow apply and save to confirm.						
Note: If IP settings are failed, r	restart EVSE v	vith jumper between IX1-GND to DHCP						
2. Sources and Consumers	settings tab	le						
SOURCES	Source nam	ne						
icon	Source icor	1						
3. Device status								
Status	Status OK,	Warning, Error, Detected						
4. Device message								
source and consumer	Source or c	onsumer power sensor management						
management	message	Messages related to source or consumer power sensor						
	×	Power sensor is connected via WM-1 module						
5. Device configuration								
Configuration	add	Associate new power sensor to source or consumer						
	del	Disassociate power sensor from source or consumer & configure it as new power-sensor						
6. Device type								
meter	Source or c	onsumer power-sensor type						
configuration	• •	Dower plant connection1						
7. Submeter option	in/ex	Power plant connection ¹						
71 Submeter option	in/ex							
sub	Check if thi circuit. Ene	s power meter or device is not part of internal rgy division for this device is ignored and green color.						
	Check if thi circuit. Ene	s power meter or device is not part of internal rgy division for this device is ignored and						
sub	Check if thi circuit. Ene	s power meter or device is not part of internal rgy division for this device is ignored and						
sub 8. New device	Check if thi circuit. Ene	s power meter or device is not part of internal rgy division for this device is ignored and						
sub 8. New device Detected new power sensor.	Check if thi circuit. Ene outlined in	s power meter or device is not part of internal rgy division for this device is ignored and						

P nominal	Enter power for device in case where power sensor is not assigned to device.						
clock	Enable timetable						
10. Permanent memory par	ameters						
[init parameters]	Init all parameters to default values						
[save parameters]	Save all parameters to permanent memory						
[read parameters]	Read all parameters from permanent memory						
[] autosave parameters	Parameters will be automatically saved to permanent memory in 15 minutes after last parameter change						
11. WM / WR settings							
Scan w-less dev.	Press to start scanning for power sensors wirelessly connected via WM-1 module as well as for WR-1 relay. Scanning is active for 5 minutes.						
WM / WR binding	Press to add new WM-1 or/and WR-1 to existing group or to create New group of wireless modules						
12. Backup / Restore to PC							
[backup]	Backup all parameters to PC						
[restore]	Restore all parameters from PC backup ²						
13. Autodetect							
[autodetect]	Click to find EVSE in local network.						

¹ only for the first power plant

² older versions of backup files may be used. Any unsuccessfully backup or restored parameters will be displayed but operation will end successfully if you use **continue**.

RDX Charger Update

RDX Charger application will detect update automatically.

👸 HEMS Configurato	or v201										- 0

(c) Robotina d.o.o.

Procedure to update RDX Charger application is as follows:

- press OK and **make sure to follow** further instructions on page (1) (2)
- hit the button Go to download page (2) which will open internet browser on download page, download and install
- hit the button Remind me later to postpone update for 5 minutes
