# EV fleet

RDX charger supports connection of up to 8 RDX Chargers - EV fleet.

In such configuration only one RDX Charger (master) is in charge of other connected chargers (slave). Master RDX Charger monitors:

- current draw by other slave chargers and in real time allocates (limits) available capacity allowing them to charge without overloading,
- data from slaves such as power, energy & settings and synchronize them with cloud service, therefore no need for extra [IOT linker](#) on slave RDX Charger.

**Note:** If there is no grid power sensor, master charger enables limiting of complete ev fleet by virtual grid power sensor.

Only one RDX charger is master in ev fleet !

**Procedure to set RDX Charger as slave is as follows:**

- [RDX Charger](#) → set Max current (1)
- RDC Charger → enable “EVSE works as slave” (2) Master SN presents serial number of master charger, it will appear once connection is established.
- RDC Charger → set current if connection with master is lost (3)
- [HEMS Configurator](#) → settings → set static IP (it's recommended) (4)
- [HEMS Configurator](#) → limiter → set “No limiter” for RDX Charger (5)

The screenshots illustrate the configuration process for setting an RDX Charger as a slave. The first screenshot shows the RDX Charger interface with the 'Max current' set to 20 A (1). The second screenshot shows the HEMS Configurator 'System settings' with 'EVSE works as slave' enabled and 'Master SN' set to 40000 (2). The third screenshot shows the HEMS Configurator 'Dynamic Load Management' settings with 'Limit if connection with master is lost' set to 6 A (3). The fourth screenshot shows the HEMS Configurator 'System settings' with 'Use the following IP address (static IP)' selected and IP address 192.168.0.124 (4). The fifth screenshot shows the HEMS Configurator 'Dynamic Load Management' table with 'No limiter' selected for the RDX Charger (5).

	Grid current limit [A]			L1	L2	L3	Voltage [V]	Phase order	Priority		
	Used current limit:	L1	L2							L3	
MAX current limit:	25	25	25								
Enable cluster slave connection											
Master current limit:	0	0	0								
Limit if connection with master is lost:	0	0	0								
Enable limiting from cloud											
Cloud current limit:	1200	1200	1200								
Limit if connection with cloud is lost:	1200	1200	1200

Max Charger	7424	2541	2320	2563	11,1	10,9	11,2	231	232	233	No limiter
Oil radiator	0	0	0	0	0,0	0,0	0,0	230	230	230	L1 L2 L3

## Procedure to set RDX Charger as master is as follows:

- HEMS Configurator → settings → output column → select “EVSE RDX external” at desired position (1). Note that “EVSE inter.” is reserved and can't be changed!

The screenshot shows the HEMS Configurator v2.0.1 interface. The 'System settings' screen is active, displaying various configuration options. The 'CONSUMERS' table is the primary focus, showing the 'RDX Charger' entry. The 'output' column for this entry is set to 'EVSE inter.' and '1'. A red arrow points to the 'EVSE inter.' text. A modal window for IP address configuration is also visible in the top right, showing options for DHCP and static IP.

Fri 12:05:16 2023.feb.10    HEMS SN: 31498 (v1.2.7b)

- HEMS Configurator → limiter:
- (3) enter allowed current value of grid fuses in case of connected grid power sensor, or max current limit of complete ev fleet if there is virtual grid active
- (4) make sure to configure phase order for grid and RDX Chargers correct as dynamic load management may not work properly. **Double check!**
- (5) select limiter priority for chargers: no limiter, limit last (last to be limited), limit second, limit first (first to be limited)

**Dynamic Load Management**

Fri 12:07:13 2023.feb.10 HEMS SN: 31490 (v1.2.7b)

- HEMS Configurator → ev fleet:

- (7) master RDX Charger,  
 (8) connected slave RDX Charger with enabled control by master (green tick) and  
 (9) connected slave RDX Charger 3 phases with disabled control (red X) → master can not control it! To enable control, run RDX Charger app on slave charger and enable “EVSE works as slave”.

The screenshot displays the HEMS Configurator v2.0.1 interface with eight RDX Charger status panels. Each panel shows real-time data and settings. The panels are arranged in a row, with a sidebar on the right and a status bar at the bottom.

- Panel 7 (Master RDX Charger):** Charging Phase L1, Power: 391 W, EVSE max: 16 A, Max current: 16 A, Last session: 145 h 24 min, Energy: 26392 Wh. Settings: Priority charg. (checked), Locked (checked), Allow charging with ventilation (checked), Disable button (checked), Turn LED off after 3 minutes of inactivity (checked), Economy charging: Current: 6 A (checked), Charge only at LD tariff (checked), Charge with surplus energy (checked). Master SN: 0. Event log: RFID\_QR. EVSE works as slave (checked). Limit if connection with master is lost: 0 A.
- Panel 8 (Slave RDX Charger):** Charging 3 phases, Power: 7650 W, EVSE max: 11 A, Max current: 32 A, Last session: 143 h 48 min, Energy: 312850 Wh. Settings: Priority charg. (checked), Locked (checked), Allow charging with ventilation (checked), Disable button (checked), Turn LED off after 3 minutes of inactivity (checked), Economy charging: Current: 8 A (checked), Charge only at LD tariff (checked), Charge with surplus energy (checked). Slave SN: 40105 ✓. EVSE works as slave (checked). Limit if connection with master is lost: 0 A.
- Panel 9 (Slave RDX Charger):** EV not connected 3 phases, Power: 0 W, EVSE max: 0 A, Max current: 20 A, Last session: 6 h 32 min, Energy: 40670 Wh. Settings: Priority charg. (checked), Locked (checked), Allow charging with ventilation (checked), Disable button (checked), Turn LED off after 3 minutes of inactivity (checked), Economy charging: Current: 6 A (checked), Charge only at LD tariff (checked), Charge with surplus energy (checked). Slave SN: 40001 ✗. EVSE works as slave (unchecked). Limit if connection with master is lost: 0 A.

The sidebar on the right contains buttons for: home, power [W], energy [Wh], timetable, tariff, DLM, ev fleet, IO mux, settings, and exit. The status bar at the bottom shows: thu 15:26:39 2023.feb.09 HEMS SN: 31490 (v1.2.7b).
